Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims **1-15**, drawn to a method of producing a zinc oxide thin film, a method of producing a photovoltaic device and a method of producing a semiconductor device substrate, classified in class 205, subclass 194.
- II. Claims **16-30**, drawn to a method of producing a zinc oxide film, a method of producing a photovoltaic device and a method of producing a semiconductor device substrate, classified in class 205, subclass 194.
- III. Claims **46, 50 and 54**, drawn to a method of producing a zinc oxide film, a method of producing a photovoltaic device and a method of producing a semiconductor device substrate, classified in class 205, subclass 194.
- IV. Claims **47, 51 and 55**, drawn to a method of producing a zinc oxide film, a method of producing a photovoltaic device and a method of producing a semiconductor device substrate, classified in class 205, subclass 194.
- V. Claims **48, 52-53 and 56**, drawn to a method of producing a zinc oxide film, a method of producing a photovoltaic device and a method of producing a semiconductor device substrate, classified in class 205, subclass 194.
- VI. Claims **49 and 57**, drawn to a method of producing a zinc oxide film and a method of producing a semiconductor device substrate, classified in class 205, subclass 194.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, III, IV, V and VI are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation, different functions, or different effects.

Group I is directed to methods using an aqueous solution containing at least zinc ions, ammonium ions and zinc ammonia complex ions.

Group II is directed to methods using an aqueous solution containing at least zinc ions, hydrogenzincate ions and zincate ions.

Group III is directed to methods using an aqueous solution containing at least zinc acetate, zinc ions and acetate ions.

Group IV is directed to methods using an aqueous solution containing at least zinc formate, zinc ions and formate ions.

Group V is directed to methods using an aqueous solution containing at least zinc benzoate, zinc ions and benzoate ions.

Group VI is directed to methods using an aqueous solution containing at least carboxylic acid ions, and zinc ions.

Each of the groups is distinct because they do not require the same components in the aqueous solution.

Art Unit: 1753

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

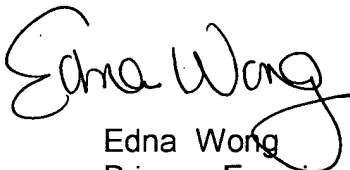

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
